Bonaventura (Federicus) [1555–1602]. De partus octomestris natura, adversus vulgatam opinionem, libri decem. Opus philosophis, medicis, ac jurisperitis æque necessarium, in Germania jam primum visum, terseque quanto fieri potuit studio, et correcte editum; in quo absolutissima de humani partus natura cognitio traditur; nimirum de conceptione, articulatione, maturitate, de partuum numero, pariendique terminis ac temporibus; utrum ante septimum mensem, ac post decimum undecimique initium, partus naturaliter edi possit. De septimestri, nonomestri, decimestri, undecimestrique partu, deque veris horum omnium causis plenissime, Aristotele duce, disputatur. Ac præter alia multa, ut, quantum valeat ratio ab Ægypti temperie, atque a mensium cum diebus crisimis consensione ducta, adversus octomestres, pernotescat; exquisita habetur Hippocraticæ, Aristotelicæ, Galenicæque sententiæ de climatum temperamentis, ac de dierum crisimorum causa, explicatio. Adjecta est ejusdem auctoris compendiosa de eodem partu disceptatio. 13 p. l., 704 pp., 27 l. fol. *Francoforti, N. Bassæus*, 1601.

In his: Physico-chyrurgical treatises [etc.]. 12°. *London,* 1714, 231–327.

———. Physico-chyrurgical treatises of the gout, the king's-evil, and the lues venerea, giving a rational account of the origin of those distempers; as likewise of the origin of their causes, their increase, progress, and symptoms; as also of their methods of cure, different from what hath been hitherto proposed; with their differences, diagnosticks, and prognosticks, and an account of a particular medicine, which in a little time removes the pain of the gout, which we have not kept as a secret, but communicated for the use of the publick; to which is added an essay of the reason of intermitting fevers and the effects of the Cortex Peru, with the method of cure by that as well as other medicines. 19 p. l., 382 pp. 12°. *London, M. Brand & J. Kent,* 1714.
See, also, **Boyle** (R.) The works of . . . 12°. *London,* 1699–1700.

Boulton (Samuel). Medicina magica tamen physica: magical, but natural, physick, or a methodical tractate of diastatical physick. Containing the general cures of all infirmities, and of the most radical, fixed, and malignant diseases belonging not only to the body of man, but to all other animal and domestick creatures whatsoever, and that by way of transplantation. With a description of a most excellent cordial out of gold, much to be estimated. 4 p. l., 195 pp., 1 l. 8°. *London, N. Brook,* [1656?].

ROBINSON (N.) A treatise on the virtues and efficacy of a crust of bread, eat early in a morning fasting; to which are added some particular remarks concerning the great cures accomplished by the silava, or fasting-spittle, as well when externally applied as when internally given, in the scurvy, gravel, stone, rheumatism and divers other diseases arising from obstructions. With some critical observations concerning the secrements of the blood, demonstrating that when regularly secreted they both contribute to preserve the life of animals and keep them in health. 8°. *London*, 1756.
